Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: Claims 1-32 are allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claimed, to teach: a circuit/control system for a DRAM device comprising: at least one buffer modules, among others as claimed in independent claims 9, 17, 21, each comprises a differential amplifiers having first input respond to a signal and second input responsive to a reference voltage, a common source stage, and an output stage, wherein the impedance of the common source stage is control by a source of a bias voltage, and the reference define the amplitude of the bias voltage; a circuit for an input buffer of a signal comprising a common source stage, among others as claimed in independent claim 25, connected between a common node and a ground reference of a differential amplifiers, wherein the impedance of the common source stage is control by a source of a bias voltage. Method of digitizing a signal comprising step of applying the reference voltage to define the amplitude of the bias voltage, and among other steps as claimed in independent claim 1; defining the amplitude of the bias voltage in response to receiving the reference voltage on the second input of the differential amplifier, and among other steps as claimed in independent claim 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
